

Toxoplasma Ab, IgM and IgG Interpretation Chart

Toxo IgM	Toxo IgG	Interpretation
Negative	Negative	No serologic evidence of infection. Early infection cannot be excluded. Correlate clinically and consider additional testing if needed.
Negative	Positive	Consistent with past infection. Cannot assess for reactivation based on serology alone.
Negative	Equivocal	Indeterminate. Correlate clinically and consider additional testing if needed.
Equivocal	Negative	Indeterminate for acute infection. Prior exposure unlikely. Correlate clinically and consider additional IgM testing if needed.
Equivocal	Positive	Indeterminate. Prior exposure likely; cannot assess for recent infection. Correlate clinically and consider additional IgM testing if needed.
Equivocal	Equivocal	Indeterminate. Cannot assess infection status. Correlate clinically and consider additional testing if needed.
Positive	Negative	Possible early infection or false-positive IgM. Correlate clinically and consider additional IgM testing if needed.
Positive	Positive	Possible recent infection; however, IgM may persist or be nonspecific. Correlate clinically and consider additional testing if needed.
Positive	Equivocal	Indeterminate. Possible early infection. Correlate clinically and consider additional testing if needed.
